STRENGTH AND TRANSCLUCENCY

- STAR ST blanks are made from biocompability zirconiumdioxyide.

- The yttrium oxide stabilizing projects the material against cracks and increase the tensile and compressive strength.

- The special grain size allocation inside the material and the added aluminum oxide also result in extra strength during milling and subsequently in clinical use.

- The outstanding mechanical characteristics, excellent chemical durability and the unbeaten biocompatibility.

- Combined with the translucent color predestine STAR ST as the ideal material provider for dental milling systems.
